FOR IMMEDIATE RELEASE

New York, February 18, 2010

HTDSTUDIO DESIGNOFFICE FEATURED IN NEW 2-VOLUME ARCHITECTURAL COLLECTION

HTDSTUDIO DESIGNOFFICE (HTDSTUDIO) is featured in a newly published 2 Volume collection of architectural proposals titled "Panel Layout for Competition" produced by DAMDI Publishing Co., Ltd., Seoul, Korea. PLFC Vols. 1 + 2 is a collection comprised of 267 Projects by 87 firms from around the world.

HTDSTUDIO DESIGNOFFICE is part of a new 2-volume set "**Panel Layout for Competition**". The book covers topics related to **ARCHITECTURE**, from architecture itself to **LANDSCAPE**, **URBAN**, **INTERIOR** and other disciplines.

HTDSTUDIO's published project is their proposal for a **zero-carbon, 24-hour city in Nordhavn**, Denmark, just outside **Copenhagen**. This community was developed with the idea of life as a focus from the inception of the design process. Great emphasis was set on carefully balancing and integrating residential, cultural, commercial, recreational, naturalistic and institutional elements of this masterplan. A holistic approach to both micro and macro organization were crucial to this ultra livable city. Special attention was given to influencing and promoting activities, interaction and microclimates. Day and night as well as summer and winter activities were key to creating a vibrant and sustainable city.

With the exception of the **Preservation** district to the North, all other districts are designed to offer residents a full variety of experiences and services within their general vicinity thus relieving them of having to travel to adjacent districts for necessities. **Nordhavn** is to be a highly sustainable development which will encompass multiple key technologies in order to greatly reduce its' carbon footprint. Flexibility and adaptability are also to be synonymous with all aspects of the masterplan. The **Historical**, **Gateway** and **Community** districts each have core use elements that are centered on a school, daycare center and other core uses that are essential to binding a community together. All districts have a well-integrated housing strategy that includes residents of all socioeconomic levels.

PANEL LAYOUT for Competition / DAMDI Architectural Publishing Co., Ltd., Seoul, Korea

267 projects with 72 design teams / Over 839 panels Total 752 pages with 2 books /
